

Cleaning Ash and Clearing Pools

Revive!® from API can deal with ash in a flash. Revive! is a concentrated multi-tasking flocculant and clarifier that can drop most contaminants to the floor of the pool within 24 hours. One 32oz bottle of Revive! can treat up to 24,000 gallons and multiple bottles can be used at one time depending on severity. Efficient and effective in chlorine levels up to 30ppm, Revive! drops ash and other contaminants to the pool floor as a silt which is heavier and easier to vacuum than traditional flocculants.

CLEAR YOUR POOL FAST!

1. Rinse off area around pool
2. Check water balance and adjust if necessary (pH & alkalinity)
3. Skim slowly, then turn off pump
4. Spray Revive! over pool water surface
5. Let pool sit 24-36 hours
6. Vacuum debris to waste
7. Clean filter, then restart pump
8. Shock pool with choice of chlorine
9. The next day add a double dose of EZymePRO® to break down any remaining organics

Also available in 1 gallon, 5 gallon, and 30 gallon sizes

Note: Most Ash is high in pH and may cause surface tension issues.

1. Adjust pH prior to treatment with Revive! and shock products.
2. Spray Revive! directly into the pool water surface to bypass potential issues with surface tension.

Multiple bottles of Revive! can be used at once if the pool is severely fouled.

Depending on the materials that burned, issues with ammonia, nitrates, sulfates, phosphates, and other micro-contaminants may manifest and persist. Revive! removes organics, carbonates, metals, and phosphates making it the best all-around product for fast clean up.
